RECOMMENDED BY FARMERS THROUGHOUT THE WORLD

“You can’t see mycotoxins, but use Ultrabond and you’ll see results”

David Wilson, Co. Antrim, Northern Ireland

David Wilson runs a herd of 170 Gravelhill Holsteins. After discovering that invisible mycotoxins found in silage affected animal health and fertility, in June 2013 David began using Ultrabond. Research shows Ultrabond binds more toxins per gram than any other commonly used product at an estimated cost of just £9 per cow, per year.

“Since using Ultrabond to control mycotoxins embryonic deaths have lowered tightening our calving pattern and we’re using less semen straws than before. We’ve also seen a big reduction in swollen hocks over the past 12 months and a reduction in the calving interval of 13 days, from 403 to 390.”
